Harley Evolution Engine 1984 - 1999 Overview | FMH Video

The Evolution engine is an air-cooled, 45-degree, V-twin engine manufactured from 1984 by Harley-Davidson for the company's motorcycles. It was made in the 1,340 cc displacement for Harley-Davidson Big V-twins bikes, replacing the Shovelhead engine until 2000 when the last EVO was placed in a production factory custom FXR4. In 1999, it was replaced by the Harley-Davidson Twin Cam 88 in the Touring and Dyna model and in 2000 in the Softail models. Also available in the Sportster model beginning i

They made a reliable coast-to-coast engine. In the Big Twin models, the Evolution engine was offered only in the 82ci size. This displacement provided more than enough power and torque for HD's bigger bikes. Horsepower increased 10% and torque increased 15% from the Shovelhead. Also part of the engine redesign was better lubrication and a reliable ignition system. Many Shovel owners reverted their ignition back to points because it was more reliable.
