artifact: irrefutable evidence of life on another planet.

Earth refugees threaten a peaceful space settlement in this influential novel from the Golden Age science fiction author of 2001: A Space Odyssey. More than two thousand years in the future, a small human colony thrives on the ocean paradise of Thalassa—sent there centuries ago to continue the human race before Earth’s destruction. Thalassa’s resources are vast—and the human colony has lived a bucolic life there. But their existence is threatened when the spaceship Magellan arrives on their world—carrying one million refugees from Earth, fleeing the dying planet. Reputed to be Arthur C. Clarke’s favorite novel, *The Songs of Distant Earth* addresses several fascinating scientific questions unresolved in their time—including the question of why so few neutrinos from the sun have been measured on Earth. In addition, Clarke presents an inventive depiction of the use of vacuum energy to power spacecraft—and the technical logistics of space travel near the speed of light. “Clarke’s simple, musical style never falters in this sobering yet far from bleak commentary on humanity’s longing for the stars. Highly recommended.” –Library Journal

In a brilliant mix of magic, history, and romance, M. K. Hobson moves her feisty young Witch, Emily Edwards, from the Old West of 1876 to turn-of-the-nineteenth-century New York City, whose polished surfaces conceal as much danger as anything west of the Rockies. Like it or not, Emily has fallen in love with Dreadnought Stanton, a New York Warlock as irresistible as he is insufferable. Newly engaged, she now must brave Dreadnought's family and the magical elite of the nation's wealthiest city. Not everyone is pleased with the impending nuptials, especially Emily's future mother-in-law, a sociopathic socialite. But there are greater challenges still: confining couture, sinister Russian scientists, and a deathless Aztec goddess who dreams of plunging the world into apocalypse. With all they must confront, do Emily and Dreadnought have any hope of a happily-ever-after?

From Arthur C. Clarke, the brilliant mind that brought us 2001: A Space Odyssey, and Stephen Baxter, one of the most cogent SF writers of his generation, comes a novel of a day, not so far in the future, when the barriers of time and distance have suddenly turned to glass. When a brilliant, driven industrialist harnesses cutting-edge physics to enable people everywhere, at trivial cost, to see one another at all times—around every corner, through every wall—the result is the
