Cisco's hierarchical network design model breaks the complex problem of network design into smaller and more manageable. Each level, or tier in the hierarchy is focused on specific set of roles. This helps the network designer and architect to optimize and select the right network hardware, software and features to perform specific roles for that network layer

In this design guide, you will find background information around the need for segmentation in today's networks to reduce the network attack surface. This document briefly looks at the history of segmentation and provides guidance around the use of macro-segmentation (VRFs/VNs) and/or micro-segmentation (SGTs) and how to determine which strategy is most applicable in different scenarios.
