The European Union is running at a fast pace in the area of economic growth. This book examines the inside details of Europe's expansion ranging from policy to exchange rates to employment and unemployment to public opinion.

The construction of the European Community (EC) has widely been understood as the product of either economic self-interest or dissatisfaction with the nation-state system. In *Europe United*, Sebastian Rosato challenges these conventional explanations, arguing that the Community came into being because of balance of power concerns. France and the Federal Republic of Germany—the two key protagonists in the story—established the EC at the height of the cold war as a means to balance against the Soviet Union and one another. More generally, Rosato argues that international institutions, whether military or economic, largely reflect the balance of power. In his view, states establish institutions in order to maintain or increase their share of world power, and the shape of those institutions reflects the wishes of their most powerful members. Rosato applies this balance of power theory of cooperation to several other cooperative ventures since 1789, including various alliances and trade pacts, the unifications of Italy and Germany, and the founding of the United States. Rosato concludes by arguing that the demise of the Soviet Union has deprived the EC of its fundamental purpose. As a result, further moves toward political and military integration are improbable, and the economic community is likely to unravel to the point where it becomes a shadow of its former self.

First Published in 2004. Routledge is an imprint of Taylor & Francis, an informa company.

The prospects and value of economic integration and regionalism in Asia are increasingly evident in what could turn out to be 'the Asian Century'. It is within this context that this important book explores the critical economic issues, security concerns and political themes pertinent to Asia in general, and to East Asia in particular. The book features contributions by both Asian and Western scholars who take an interdisciplinary approach encompassing

economics, political science and culture. They address various issues including the application of European experiences to Asia, and blend regional country perspectives with broader external views from Russia and the US. In conclusion, the book suggests a tentative roadmap and future directions for an Asian community asserting the importance of cultural and value studies. This objective analysis of Asian regionalism explores perspectives from both within and outside the region. As such it will prove a fascinating read for academics and researchers, practitioners and policy-makers in a wide variety of fields, including Asian studies, economics, public policy, political economy, international relations and regional science.

This book provides a thorough overview of how money is used as a tool to achieve international political aims.

A Monetary Hope for Europe. This book studies the euro in a global perspective and opens a new series edited by the Jean Monnet European Centre of Excellence of the University of Florence, Verso *l' unificazione europea*. Most of the chapters have been written by economists who met and discussed their diverse views at a multi-disciplinary conference organized by the Centre in May 2013 under the title *The euro and the struggle for the creation of a new global currency: Problems and perspectives in the building of the political, financial and economic foundations of the European federal government*. The list of contributors also includes historians as well as European and international law academics. Their essays have been revised on the basis and against the backdrop of an ongoing crisis of both the euro and the whole European project in the last years and months. The volume aims to provide useful data and interpretations to improve knowledge on the euro and the European Union in their economic, historical, juridical and political perspectives. --

The "European Yearbook" promotes the scientific study of nineteen European supranational organisations and the Organisation for Economic Co-operation and Development (OECD). Each volume contains a detailed survey of the history, structure and yearly activities of each organisation and an up-to-date chart providing a clear overview of the member states of each organisation. In addition, a number of articles on topics of general interest are included in each volume. A general index by subject and name, and a cumulative index of all the articles which have appeared in the "Yearbook," are included in every volume and provide direct access to the "Yearbook"'s subject matter. Each volume contains a comprehensive bibliography covering the year's relevant publications. This is an indispensable work of reference for anyone dealing with the European institutions.
