After six years of research, six case studies, and more than 220 interviews with Toyota employees, distributors, and dealers across the globe, the authors provide fascinating insights on the inner workings of the Toyota company and why it is so successful.

East Asia is one of the world's most dynamic and diverse regions and is also becoming an increasingly coherent region through the inter-play of various integrative economic, political and socio-cultural processes. Fully updated and revised throughout, this new edition explores the various ways in which East Asian regionalism continues to deepen. The second edition has been expanded to incorporate coverage of significant issues that have emerged in recent years including: Growing tensions in the region over maritime territory and historical issues Competing regional free trade agreement negotiations The impact of the global financial crisis on financial co-operation and engagement with global governance Obama's 'pivot to Asia' and developments in US relations with East Asia The influence of new technology and social media on micro-level regional relations The growing importance of 'new diplomacy' issues such as energy security, climate change, food security and international migration. Key pedagogical features include: end of chapter 'study questions' case studies that discuss topical issues with study questions also provided useful tables and figures which illustrate key regional trends in East Asia Extensive summary conclusions covering the chapter's main findings from different international political economy perspectives. East Asian Regionalism is an essential text for courses on East Asian regionalism, Asian politics and Asian economics.

The book arose from a multi-disciplinary study which looked at the development of global-local manufacturing clusters in the context of a developing, Asian economy. The study demonstrates the connection amongst theoretical perspectives such as international business, development studies, economic geography, and organisational learning clusters/production networks through an in-depth case study of the Indonesian automotive cluster. The book gives a detailed account of two automotive clusters (Toyota and Honda) and their contribution to regional economic development in emerging economies in Asian region. The book builds on existing literature to develop a theoretical framework to shed light on the study's empirical findings. The book discusses practical implications for both the business community and policy makers. The discussion on global-local networks in an Asian context supplements existing literature and case studies in the field. This is one of the few books that explicitly links regional clusters to global networks. The book offers a refreshingly international (Asian) perspective to the literature on clusters and economic geography for emerging economies.

This book looks at the industrial policies of Southeast Asian economies in their motor vehicle industries from early import substitution to policy-making under the more liberalised WTO policy regime. The book examines how inward automotive investment, especially from Japan, has been affected by policies, and how such investment has promoted industrial development in the late-industrialising economies within ASEAN (Association of Southeast Asian Nations). It provides insights into the automotive industry of Southeast Asia in terms of production volumes, sales volumes, market structure, and trade. Through country case studies, the book is a useful reference and illustrates how industrial policies in Southeast Asia have affected the spread of automotive development in the region. It will appeal to policy-makers and researchers interested in the automobile industry, industrial policies in the industry and the spread of development from foreign investors to local firms.

There are many books on the market that discuss the Toyota Production System but few that insightfully analyze its marketing strategy. Authored by former Toyota marketing executives, this is the first book of its kind to detail how Toyota's thinking habits go beyond the shop floor and influence and guide Toyota's marketing function. Toyota has expanded from a venture enterprise to one of the biggest global enterprises because of its innovative mindset (Toyota thinking habits) using Breakthrough Thinking, which supports a new philosophical approach to problem solving, turning 180 degrees away from conventional thinking. Written by Toyota's former executive managing director and founder of Breakthrough Thinking, Toyota's Global Marketing Strategy: Innovation through Breakthrough Thinking and Kaizen: Explores Toyota's 'Breakthrough Thinking' Examines how Toyota conducts information gathering. Illustrates how Toyota builds and maintains its unique business culture Shows how Toyota "goes to the customer" and comprehensively studies how customers use their products Reveals Toyota's cars have become some of the biggest selling models in the USA The authors of this book explore Toyota thinking habits as well as Toyota's global marketing strategy, which, since the 1980sa, has been expanding exponentially. The reader will understand the importance of thinking habits in the workplace and will know how to apply them using Toyota as the prime case study.

This lucid and informative book analyzes the problems of clusters in transition through studies of agglomerations at different stages of development in various East Asian countries. The contributors reconsider industrial cluster policy within a more dynamic and long-term framework, and explore how regional transformations can bring new insights to the theory of agglomeration and innovation. By identifying the factors and policies to promote upgrading, the authors establish the theoretical and policy basis for transforming industrial clusters from production-oriented to innovation-oriented agglomerations. They also study the important structural changes in the region, such as FTAs and the role of the WTO, and the consequent effects on clusters. Researchers and students of Asian economics, industrial clusters and innovation will find this incisive book invaluable. It will also prove to be a compelling read for policymakers in developing countries or international development organizations.

This research focuses on the process of growth in the automobile industries in the ASEAN region. ASEAN is drawing attention both from the vantage point of its position as an automobile-producing region and as a potential automobile market. Thailand in particular has long treated automobile production as a national strategy, and this research puts considerable focus on Thailand's initiatives. Since 2012, the authors have been carrying out on-site surveys and have visited many of the suppliers that form the local automobile industry; this published research represents a summary of those findings. The fields of speciality of this study's respective authors differ, so analyses have been made from a range of vectors. In particular, the focus is on the supply chain in what is generally referred to as a keiretsu.
