David B. Coe, winner of the William L. Crawford Award for Best First Fantasy Series for the LonTobyn Chronicle, continues his rise to the top rank of fantasy writers with Rules of Ascension, the first novel of an exciting new epic fantasy quartet, Winds of the Forelands. For centuries the Forelands were disputed by several tribes. Then came the magically gifted Qirsi--physically no match for their foes, but capable of mindsight, creating and controlling mists and fire, and bending solid matter to their purpose. After a Qirsi traitor betrayed his race to save himself, the Qirsi were defeated and dispersed among the seven realms of the Forelands. Those specially endowed Qirsi capable of multiple powers, the Weavers, were all put to death. For centuries the Forelands enjoyed relative peace. But when Tavis, the heir to the Kingdom of Curgh, is wrongfully blamed for the murder of a noble, the accusation sets in motion a series of events culminating in civil war. The ensuing chaos topples the throne in Eibithar and threatens to rain chaos on all the realms of the Forelands. Tavis, thrust into the center of deadly controversy and stripped of the protection of his family's nobility, turns to the Qirsi, his last remaining hope for redemption. But another Qirsi traitor, secretly fomenting fear and mistrust among the Dukedom, seeks to destroy Tavis. Tavis must survive long enough to clear his name and save an entire kingdom. A powerful, compelling tale set in an unforgettable land, rules of Ascension will capture your heart and fire your imagination.

A Best Book of the YearSeed Magazine • Granta Magazine • The Plain-DealerIn this fascinating and utterly engaging book, Carl Zimmer traces E. coli's pivotal role in the history of biology, from the discovery of DNA to the latest advances in biotechnology. He reveals the many surprising and alarming parallels between E. coli's life and our own. And he describes how E. coli changes in real time, revealing billions of years of history encoded within its genome. E. coli is also the most engineered species on Earth, and as scientists retool this microbe to produce life-saving drugs and clean fuel, they are discovering just how far the definition of life can be stretched.

Tulisa Contostavlos is one of the most talented and high-profile recording artists working in the UK today. She has three platinum N-Dubz albums, four MOBO awards, a groundbreaking drama series, two documentaries, a MIND award and an X Factor judge's win under her belt. Not bad for a girl who's not yet twenty-four. But this is not just a tale of glittering success. Tulisa grew up on a tough London estate and left school with no qualifications as she struggled to cope with deep-seated emotional problems while caring for her mother alone. She has seen first hand what drugs, alcohol, gang culture and violent relationships can do to young people, but she has come through it all to become the confident, inspiring artist she is today. After taking her little muffins Little Mix to the winning spot of the X Factor at the end of 2011, and with her long-awaited solo album being released later this year, the future is bright for Tulisa. Told in her own words, this is her story.

"[Explores] how athletes, scientists, therapists, companies, and musicians around the world are learning to break through their plateaus--to turn off the forces that cause people to 'get used to' things--and turn on human potential and happiness in ways that seemed impossible"--

Desiderius Erasmus was a very human man. A humanist, who was no more humane than the rest of the wits and cynics of his time, there was in him plenty of human weaknesses and uglinesses. Nevertheless he does strike occasionally a note that is genuinely human, universally true, accordant with all the race of men. And this is eminently so of the "Complaint of Peace." The complaints which he puts in the mouth of Peace might have come from the lips of Divae Paris with as much verisimilitude as they did when Erasmus echoed them many centuries ago.

Illuminating, widely praised book on analytic geometry of circles, the Moebius transformation, and 2-dimensional non-Euclidean geometries.
