In addition, the natural waxing-up technique is considered to be one of the most appropriate methods of implementing the occlusal compass to facilitate the modeling of anatomically correct and functional occlusal surfaces of molar teeth. This DVD includes a presentation of the occlusal compass, the applicable anatomy, nomenclature, dental coordinate system, and the waxing-up of all segments of a maxillary molar and an entire quadrant following natural waxing-up technique.

Inlay waxes may be softened over a flame or in water at 54 °C to 60 °C to enable their flow in the liquid state and their adaptation to the prepared tooth or die. For direct wax techniques type I inlay wax must soften at a temperature that is not hazardous to the pulp tissue, and it must harden at a temperature above mouth temperature. These waxes are designed to maintain uniform workability over a wide temperature range and to facilitate accurate adaptation to the tooth or die under pressure.
